Description

The wheel lock is used to quickly and safely immobilize the vehicle. It allows you to block the traffic of vehicles with which traffic violations have been committed. The wheel lock is constructed in such a way as to minimize damage to the car rim and the lock itself, thanks to which the life of the locks is much longer.

The wheel locks are made of a metal structure and are painted bright yellow so they are perfectly visible. They are adapted to be mounted on a wheel with a rim size of 17 inches and a tire width of 210 mm. The wheel lock is padlockable and weighs 15 kg.

Our car wheel locks are used by the Municipal Police in Warsaw. They will also work well in private parking lots, public spaces or events. The wheel lock can also be used to protect the vehicle against theft.

Features:

Can be used for wheels up to 17 inches and a tire width of 210

Lockable with a padlock.

Lock weight 15 kg.
