Dimension	250 x 500 x 70 mm
Color	Black
Material	Recycling
Weight	4 kg
Shipping time	3-7 days

Description

Slowly 5 – black end element for 50 mm speed bump, recycled material

Black end element for Slowly 5 – clean, professional finish for modular speed bumps

The **black end element for the Slowly 5 speed bump, height 50 mm**, is a dedicated **start/end module** designed to complete the edges of the modular **Slowly 5 traffic calming system**. Every correctly assembled speed bump requires **two end elements** – one at the beginning and one at the end of the installation. The black colour provides a neutral, professional look that blends well with modern car parks, industrial estates, business parks and private sites where a more discreet appearance is preferred.

This end module is manufactured from **flexible and durable recycled material**, resistant to vehicle loads, intensive use and changing weather conditions. The carefully shaped profile ensures a controlled, smooth entry and exit when drivers keep to the recommended speed. The black end element is fully compatible with all **Slowly 5 middle elements** (500 × 400 × 50 mm, approx. 2 kg), allowing you to create a speed bump in standard lengths from 1.5 m up to 6.0 m.

Technical characteristics – black end element Slowly 5

- Product type: **start/end element for Slowly 5 speed bump**
- System height: **50 mm**
- Material: **flexible, robust recycled material**
- Colour: **black**
- Dimensions: **250 × 400 × 50 mm**
- Approximate weight: **4 kg**
- Fixing: **2 mounting bolts per end element**
- Compatibility: **Slowly 5 middle elements 500 × 400 × 50 mm (approx. 8 kg)**

Installation and fixing accessories

For installing **Slowly 5 speed bumps**, including black end elements and middle modules, we recommend using **12 × 120 mm screws with plugs and large washers**. When purchasing **single elements**, such as this black end piece, the fixing screws are **not included** and should be ordered separately. When you order complete speed bump sets, the correct number of fixing screws is **included in the set and delivered with the shipment**.

End modules are placed at both edges of the speed bump and anchored to the ground with two bolts each. Middle sections (500 mm wide) are fixed with four bolts. Proper anchoring of all modules guarantees stability, durability and safe operation of the whole traffic calming device.

Legal aspects – use of speed bumps on public roads

The black end element is part of a professional **road safety device**. When speed bumps are installed on **public roads**, national traffic regulations and technical guidelines must be followed. In particular, **the use of vertical traffic calming devices on public roads requires appropriate traffic signs placed at the correct distance before the bump**. The road administrator or investor is responsible for correct signage and for compliance with local legal requirements and approved traffic management designs.

Application and usage scenarios

The black end element is used wherever the modular **Slowly 5 speed bump** is installed and a neutral finish is desired:

- finishing speed bumps on car parks at office complexes and business parks,
- completing traffic calming devices on internal roads in residential and mixed-use estates,
- marking the start and end of speed bumps on industrial sites and logistics yards,
- finishing modular bumps at fuel stations, service areas and private driveways,
- replacing damaged end pieces on existing Slowly 5 installations as spare parts.

Five additional ways to use the black end element

1. As a discreet end marker in custom speed bump layouts with black middle sections.
2. As a safety edge around low ramps or internal traffic platforms.
3. For temporary traffic calming layouts during refurbishments or reorganisation of sites.
4. As part of maintenance stock for large car parks or industrial plants with many speed bumps.
5. To extend existing speed bumps by adding extra middle elements and two new black end pieces.

Quality, warranty and supplier expertise

The black Slowly 5 end element is covered by a **warranty**, and the use of **high-quality recycled material** ensures long service life and resistance to intensive use. The product offers an attractive **price-to-quality ratio**, making it suitable both for new installations and for upgrading existing traffic calming systems.

Our company has many years of experience in **road safety equipment**. We operate as a **manufacturer and direct importer** of speed bumps, end elements, traffic calming products and a wide range of road equipment. We supply wholesale and retail customers across several European markets. **Most products are dispatched directly from our warehouse**, which guarantees **fast delivery** and high availability. With our extensive portfolio of **road safety devices**, the Slowly 5 system and its black end elements form a key part of our traffic calming solutions.
