Technical Specification

Attribute	Value
Dimension	800x145x120mm
Color	Black
Material	PCV
Weight	10 kg
Shipping time	3-7 days

Description

Parking limiters are made of durable PVC, which makes them resistant to collision by vehicles. Parking separators are used to secure the car park and prevent vehicles from driving beyond the edge of the designated parking space. This is to limit damage to vehicles as a result of a collision and minimize the chance of damage to infrastructure. Parking fenders can be used in both large and small car parks, they will also work well in a local garage. Thanks to reflective elements, parking limiters are perfectly visible to road users and are easy to transport and install. Parking separators can be used as a rubber curb, separating traffic lanes, securing bicycle or pedestrian paths or marking traffic lanes for public transport.

Dimension: 800x145x120mm

Weight: 12 kg.

Mounting: with 3 mounting pins (sold separately).

Application:

- separation of parking spaces,
- separation of pedestrian traffic from vehicle traffic,
- securing walls, pillars and other infrastructure against vehicle hits - blocking further invasion,
- designation of traffic lanes,
- temporary traffic arrangement,
- marking of bicycle paths,
- separation of areas excluded from traffic,
- as a curb.

We recommend our maintenance services up to 100 km from Warsaw
