Speed bumper Slowly 5, end element, 250x400x50 mm, yellow

SKU: PPZSLY25405D

Gross Price: PLN 65.19

Net Price: PLN 53.00

Technical Specification

Attribute	Value
Dimension	250x400x50 mm
Color	Yellow
Material	Recycling
Weight	2 kg
Shipping time	3-7 days

Description

Slowly 5 – yellow end element for 50 mm speed bump, recycled material

Yellow end element for Slowly 5 – professional finish for modular speed bumps

The **yellow end element for the Slowly 5 speed bump, height 50 mm**, is a dedicated component used to finish both sides of the modular **Slowly 5 traffic calming system**. Each complete speed bump requires **two end elements** – one at the beginning and one at the end of the installation. The yellow colour improves visibility and clearly marks the edge of the bump, helping drivers recognise the start and end of the vertical traffic calming device.

The end module is made from **flexible and durable recycled material**, resistant to mechanical loads, temperature changes and intensive traffic. Its shape is carefully profiled to ensure smooth entry and exit, reducing the risk of damage to tyres and suspension when the recommended speed is observed. The yellow end element is compatible with all **Slowly 5 middle elements**, which are available in black and yellow, allowing you to create a speed bump in standard lengths from 1.5 m up to 6.0 m.

Technical characteristics – yellow end element Slowly 5

- Product type: **end element (start/end) for Slowly 5 speed bump**
- System height: **50 mm**
- Material: **flexible and robust recycled material**
- Colour: **yellow**
- Dimensions of end element: **250 × 400 × 50 mm**
- Approximate weight: **2 kg**
- Fixing: **2 mounting bolts per end element**
- Compatibility: **Slowly 5 middle elements 500 × 400 × 50 mm (approx. 8 kg)**

Installation and recommended fixings

For mounting **Slowly 5 speed bumps** – including end elements and centre modules – we recommend using **12 × 120 mm screws with plugs and large washers**. When purchasing **single elements** (such as this yellow end piece), the fixing screws are **not included** and should be ordered as separate items. When you purchase complete speed bump sets, the correct number of fixing screws is **included in the set and delivered with the shipment**.

End modules are installed at the outer edges of the bump and fixed with two bolts each. The middle elements (500 mm wide) are fixed with four bolts. Proper anchoring to the substrate ensures stability, long service life and safe operation of the entire speed bump.

Legal aspects – use of speed bumps on public roads

The end element for Slowly 5 is part of a professional **road safety device**. When using speed bumps on **public roads**, national traffic regulations must be respected. In particular, **the use of vertical traffic calming devices on public roads requires appropriate traffic signs, placed at the correct distance before the bump**. The road administrator or investor is responsible for proper signage and for complying with local legal requirements and approved traffic management designs.

Application and usage scenarios

The yellow end element is used wherever the Slowly 5 modular speed bump is installed:

- finishing speed bumps on car parks at retail parks, supermarkets and office buildings,
- completing traffic calming devices on internal roads in residential and commercial estates,
- defining the start and end of speed bumps at industrial sites and logistics yards,
- clearly marking entry and exit points of speed bumps at fuel stations and service areas,
- replacing damaged end elements in existing Slowly 5 speed bumps as spare parts.

Five additional ways to use the yellow end element

1. As a visual end marker in custom speed bump configurations with mixed black and yellow modules.
2. As a safety edge for low ramps or platforms in internal traffic zones.
3. For temporary traffic calming arrangements during events or construction phases.
4. As a replacement component in maintenance contracts for large car parks and industrial sites.
5. To extend existing speed bumps by adding extra middle elements and two new yellow end pieces.

Quality, warranty and supplier information

The yellow Slowly 5 end element is covered by a **warranty**, and the use of **high-quality recycled material** ensures durability and resistance to intensive use. The product offers an excellent **price-to-quality ratio** and is a cost-effective solution both for new installations and for maintenance of existing speed bumps.

Our company has been specialising in **road safety equipment** for many years. We are a **manufacturer and direct importer** of speed bumps, end elements, traffic calming devices and a wide range of road products. We sell to wholesale and retail customers on many European markets. **Most items are dispatched directly from our warehouse**, ensuring **fast delivery** and high availability. We offer a very wide range of road products and focus on professional **traffic safety devices** – the Slowly 5 system and its yellow end elements are an important part of our portfolio.
