Concrete barrier B35 / 45

SKU: BA81BET35/45GR2SSZT-BLOK

Gross Price: PLN 848.70

Net Price: PLN 690.00

Technical Specification

Attribute	Value
Dimension	2000mm x 550 x 810 mm
Color	Grey
Material	Beton C30 / 37
Weight	1200 kg
Shipping time	7-14 days

Description

U-14b Concrete Safety Barrier C30/37 – Raw Power and Operational Economy

We present a **professional concrete barrier** with dimensions of **2000 mm x 550 mm x 810 mm** and a **massive weight of 1200 kg**. Constructed from **C30/37 class concrete** (with enhanced strength), it provides **exceptional resistance** to weathering, abrasion, and chemical exposure. This is a **maintenance-free solution**, offered in the **natural, gray color of concrete** (unpainted), which eliminates the cost of coating renewal.

Key Parameters and Application:

- **Material: C30/37** Concrete – guarantee of **minimal water absorption** and **maximum structural lifespan**.
- **Safety Function:** The barrier's mass and shape ensure a **high level of passive safety** (consistent with the U-14b type), effectively **preventing vehicles from leaving the carriageway** and **safely redirecting the vehicle** back onto the travel lane.
- **Ideal for:** Private areas, parking lots, temporary construction site protection, and wherever **durability and zero maintenance** are priorities, and **formal CE certification is not required** by regulations.

> **Important Note:** This concrete barrier **does not possess the CE certificate** for *Road Safety Equipment* required for installation on public high-speed roads (motorways, expressways, etc.). Its application is dedicated to areas where **regulations permit the use of barriers without this certification**, focusing on the **technical quality of the concrete (C30/37)** and **functional utility**.

As a **manufacturer**, we guarantee **the highest quality of C30/37 execution** and **fast logistics**.
