Concrete barrier B35/45, 810 mm, yellow-black

SKU: BA81BET35/45RW2SSZT-BLOK

Gross Price: PLN 1,168.50

Net Price: PLN 950.00

Technical Specification

Attribute	Value
Dimension	2000 x 550 x 810 mm
Color	Red/White
Material	Beton C35 / C45
Weight	1200 kg
Shipping time	14-30 days

Description

Concrete Safety Barrier B35/45 – Unrivaled Durability in the Toughest Conditions

We present the **concrete safety barrier** type **U-14b** with technical parameters meeting the **most stringent engineering requirements**. Dimensions of **2000x550x810 mm** and a weight of **1200 kg** are supported by **B35/45 (C35/45) class concrete**. This material features **the highest compressive strength**, **minimal porosity**, and **outstanding resistance to aggressive environments** (e.g., chlorides, road salts, and freeze/thaw cycles), ensuring the **longest possible lifespan** of the structure.

Key Safety and Visibility: The barrier features **warning paintwork in diagonal white-red stripes (50 cm wide)**, which is **perfectly visible** and effectively **marks the outer edge of the carriageway**, consistent with the function of U-14b barriers. The primary task is to **safely redirect the vehicle** onto the travel lane upon collision, while **minimizing damage** and ensuring the **structural integrity** of the barrier due to the **extreme strength of B35/45**.

Application Recommendations: Due to its **unrivaled durability**, this model is intended for **the most important and strategic road investments**: construction of **motorways A and S**, **bridges of critical importance**, **tunnels**, and areas where the **cost of replacement or repair is critical**. As a **manufacturer** and **market leader** in the supply of **road safety equipment**, we guarantee **the highest quality of execution**, **competitive prices**, and **fast logistics** for this **most durable B35/45 concrete barrier**.
